Fresh Graduate in Informatics Engineering with experience in Linux server administration, containerization, network troubleshooting, and infrastructure automation. Familiar with Docker, virtualization, monitoring, and deployment processes, with a strong interest in DevOps Engineering and IT Infrastructure.

Work Experiences

PT Temas Tbk - Jakarta <i>DevOps Engineer - Internship</i> - Managed containerized applications using Docker across development and production environments. - Created and maintained Jenkins and GitLab CI pipelines to automate application build, deployment, and verification processes. - Automated routine server tasks such as backup scheduling and log rotation using Bash and Python scripts. - Set up application monitoring and tracing using Zabbix, SigNoz, and Grafana to detect and troubleshoot service issue - Integrated SAST and DAST security checks into CI/CD pipelines to identify vulnerabilities before deployment. - Built a data replication pipeline from PostgreSQL to ClickHouse for analytics.	Nov 2025 - May 2026
DPTSI Institut Teknologi Sepuluh Nopember - Surabaya <i>Research Assistant</i> - Developed a deep learning model to estimate vehicle speed from dashcam videos using optical flow techniques. - Designed and implemented an end-to-end AI workflow. - Built scalable pipelines for dataset collection, cleaning, and training to support efficient model development. - Conducted experiments to optimize model performance, including automated evaluation under varying conditions. - Integrated AI workflows with automation scripts for preprocessing and model deployment.	Jul 2024 - Dec 2024
Binar Academy - Jakarta <i>Android Developer - Apprenticeship</i> - Developed Android applications using Kotlin, MVVM architecture, and Firebase Authentication, integrating REST APIs through Retrofit - Designed responsive and user-friendly UI layouts, and implemented DataStore for efficient user session and preference management. - Applied Dependency Injection (Koin and Dagger Hilt) to improve scalability and maintainability. - Performed unit testing, debugging, and performance optimization to enhance app reliability. - Collaborated with cross-functional teams under Agile or Scrum workflow.	Feb 2024 - Jul 2024

Education Level

Institut Teknologi Sepuluh Nopember - Surabaya <i>Bachelor of Informatics Engineering, 3.49/4.00</i>	Aug 2021 - Aug 2025
--	---------------------

Projects

PostgreSQL Deployment Automation - Automated PostgreSQL user and role provisioning using Terraform, reducing manual database administration. - Integrated Terraform with Jenkins and GitLab to automate validation, planning, and deployment across multiple user role environments. - Implemented approval gates and automated Terraform state backups to improve deployment control and reduce production risks.

Skills

- Programming Languages: Go, Python, Kotlin, PHP, JavaScript - DBMS: MySQL, PostgreSQL, Clickhouse - DevOps & Cloud Tools: Docker, GitLab CI, Jenkins, Signoz, Grafana, AWS, GCP, - Languages: Indonesian (Native), English (Intermediate) - Soft Skills: Problem Solving, Critical Thinking, Adaptability, Collaboration, Continuous Learning
